Practice 3

Following the Practice 2 , use polymorphism to merge the Warrior class's NewMoon(Warrior W) and NewMoon(Witch S) methods into a single method NewMoon(Role R). Similarly, merge the Witch class's SmallFire(Warrior W) and SmallFire(Witch S) methods into a single method SmallFire(Role R).

Create a heterogeneous array of ROLE type to store 6 characters. Randomly select two characters to fight, ensuring that the two selected characters are not the same person.
